

The story of Christian and Florence

Tranquil in the kitchen, I make sure to cut the vegetables the way my wife wants. Mix everything in the bowl, add salad spices, salt, pepper and ... what else is missing? Ah, feta cheese... lots of it! My daughter looks at me with sparkling eyes! The salad has suddenly become appetizing.

I turn around, open the fridge door, rummage through the jungle of Tupperware and Mason jars when suddenly, the refrigerated tractor starts up. The old fridge's compressor signals its presence quite spectacularly.

My wife Florence swings her toupee around and bellows in discouragement: "Yes indeed... our old fridge is due. We're planning to redo the kitchen. Should we change it while we're at it?" she says. "Anyway, they will need the dimensions to make the cabinets. We might as well make them fit a new fridge instead of your old university reguine."

I smile at her. It's true, it's done his time: "What would you like?"

"Something new, modern, different. I'm looking for something that punches when you walk into the kitchen."

"Wait there," I say a little nervously. "I don't want to mortgage the house to change the fridge. That stuff costs a fortune."

"Don't worry, Christian. I saw something really interesting on the JC Perreault website. They have a fridge that's big enough for the family and has a glass door. I think it's so beautiful."

"Let's see, what are you telling me Flo?" I start laughing. "We're not putting a glass door on our fridge. Are you going to add that to the to-do list now... cleaning out the fridge?"

Her eyes had sharpened sending me a warning signal... DANGER, DANGER, with a C3P0 voice. "No! The door. It's glass, yes, but it's tinted. You can only see a little inside."

"Okay, but then what's the point if you can't see anything?"

"You can see inside that's the magic. When you knock gently on the glass three times, a light comes on and shows you the items. It's really modern and techno, just the way you like it."

I confess!

My wife continues enthusiastically : "There's even a little door that gives you access to your favorite refreshments. It's like a door within a door. It just opens the item compartment inside the door. This way, you don't lose your freshness and you don't run the fridge for nothing. You save on electricity consumption," she finishes with a wink!

I admit I wasn't hard to convince. I wanted a change. Not at any price, though. I still wanted to stick to a budget, but to go for something more high-end than my old fridge.

I started looking around to complete the package. If we change the fridge, we might as well change the stove too. I really like the induction principle. I'm going to check out JCPerreault.com for fun...
